SARA RAHME

Senior Computer Engineering Student & Shopify Developer
Beirut, Lebanon | +961-81-642-519 | sarahrahme9@gmail.com

EXPERIENCE

7 limes — Web Developer June 2026 – Present
Digital agency

- Hired as Web Developer; to date have delivered 2 client engagements as Shopify developer, owning each build end-to-end.
- Built and customized Shopify Online Store 2.0 themes (Horizon base) with custom Liquid sections, CSS, and JS, including a 14-section custom homepage, mega menu, and About Us page for one client.
- Set up bulk CSV product import workflows (150+ SKUs across batches), automated tag-driven collections, and custom packing slip templates.
- Implemented bilingual (English/French) storefront support and Arabic/RTL localization for custom sections, and made custom CSS dynamically inherit typography settings from the theme customizer.
- Worked directly with clients on checkout and payment setup, shipping configuration, and store training.

EDUCATION

Bachelor of Engineering in Computer Engineering Expected Graduation: June 2028
Lebanese American University (LAU), Beirut, Lebanon

- **Relevant coursework:** Deep Learning, Software Engineering, Database Systems, Data Structures, Object-Oriented Programming (C++), Computer Architecture, Microprocessors, Digital Systems, Logic Design, Probability & Statistics, Electronics I, Electric Circuits, Signals and Systems, Engineering Economy, Engineering Ethics
- **Currently taking:** Operating Systems, High-Performance Computer Architecture, Control Systems

SKILLS

- **Programming:** Python, Java, C++, JavaScript, SQL, Assembly (Easy68K, HCS12)
- **Web & E-commerce:** HTML, CSS, Bootstrap, Shopify Liquid, Shopify theme development (Online Store 2.0), REST API integration
- **Data & ML:** Deep learning (1D CNN, BiLSTM), model evaluation (precision, recall, F1), handling imbalanced data
- **Tools:** Git & GitHub, VS Code, MySQL/MariaDB, Node.js, Express, LTspice, PSpice, Altera Quartus, LaTeX, Microsoft Office

SELECTED PROJECTS

ECG Heartbeat Classification | *Deep Learning Course* 2026

- Designed and trained a hybrid 1D CNN + BiLSTM model to classify ECG heartbeat signals (MIT-BIH Arrhythmia Database) as normal or abnormal, converting 5 original classes into a binary task.
- Addressed class imbalance with stratified splitting and class weighting; used early stopping and evaluated with precision, recall, F1-score, and confusion matrix, prioritizing recall on abnormal beats.

MiniGPT — Chatbot Web App | *Software Engineering Course* 2026

- Built a lightweight chatbot web app in plain HTML, CSS, and JavaScript (no frameworks) with live AI API integration and a chat UI with color-coded user/AI messages.
- Handled the API key securely in session memory only, injecting it into the Authorization header on each request.

PharmaFlow — Pharmacy Management System 2026

- Built a full-stack pharmacy management system using Node.js, Express, and MySQL with role-based access control.

Heartbeat Monitor | *Electronics Course* 2026

- Designed and built a heartbeat monitor circuit as part of the Electronics I course.

Hotel Management System | *Object-Oriented Programming (C++) Course* 2025

- Developed a hotel management system in C++ applying object-oriented design principles.

Hogwarts Student Records System | *Database Systems Course* 2025

- Designed a relational database for student records, houses, courses, grades, and disciplinary data using ER modeling, normalization, and SQL queries to ensure data integrity.

Elevator Control System | *Microprocessors (HCS12) Course* 2025

- Built an elevator control application on the HCS12 microcontroller handling floor requests, motion, and door operations.

Grading System in Assembly | *Assembly Language Programming Course* 2024

- Developed a grading system in Easy68K assembly to evaluate scores, assign letter grades, and flag top students.

SOFT SKILLS

- Organized and dependable; fast learner who quickly adopts new tools; clear communicator in teams.
